KNES 601: Epidemiology of Physical Activity (Course Modification)

Updated course material and content to include more depth and breadth to physical activity epidemiological concepts covered. Incorporated principles of sustainability as relate to active living that were discussed during the Chesapeake Project Faculty Development Workshop. Created new assignments and in-class exercises to provide students with opportunities to apply knowledge and stimulate class discussion.

KNES 497: Physical Activity, Built Environment and Public Health (Course Creation)

Created a new upper level course for undergraduate kinesiology majors that will allow students to examine and critically analyze the current research literature relevant to the relationship between the built environment and physical activity as well as the public health impacts of this relationship. An in-depth, independent examination of the current active living research will be achieved through in-class discussions and interactive assignments in the class as well as in the community,
