The Department of Epidemiology and Biostatistics provides rigorous training in the fundamental sciences underlying public health practice. Our mission is to improve health and reduce health disparities in local communities, the state of Maryland, and the nation.

Our epidemiology faculty have multi-faceted expertise in the epidemiology of infectious and chronic disease, with particular focus in the areas of HIV/STIs, cancer, health disparities, cardiovascular disease, obesity/physical activity, and sexual and reproductive health. We also specialize in social and behavioral determinants of health, aging, cultural competency, and community-based interventions.

Our biostatistics faculty have research interests in biostatistics, epidemiology, and bioinformatics. We apply statistical techniques to analyze and interpret public health data through survival and longitudinal analysis, computational statistics, statistical analysis of genomic and proteomic data, machine learning, neuroimaging statistics, network meta-analysis, missing data analysis, and Bayesian hierarchical methods.

Current research projects include:

- testing a randomized controlled trial intervention to improve quality of life among Korean American breast cancer survivors
- using a social network approach to study risky behaviors for HIV/STIs
- examining the impact of racial minority stress on accelerated biological aging, mortality, and other health outcomes
- developing sample size and power calculations for genomic studies using next generation deep sequencing platforms
- analyzing brain networks to identify biomarkers of mental health disorders using fMRI data

“I was drawn to public health because for me it’s all about social justice... I chose the Department of Epidemiology and Biostatistics because it focuses on the social determinants of health disparities.”

GRACIELA JASCHEK
MPH, PHD, ’14, EPIDEMIOLOGY RESEARCH ASSISTANT PROFESSOR, UMD SCHOOL OF PUBLIC HEALTH, DEPARTMENT OF EPIDEMIOLOGY AND BIOSTATISTICS
GRADUATE DEGREE PROGRAMS
An MPH in Epidemiology or Biostatistics prepares you to work as a practitioner, researcher, administrator or consultant in a health care setting.

Master of Public Health, Epidemiology
The MPH in epidemiology emphasizes training in the application of epidemiologic methods to the study of disease occurrence, prevention and control.

Master of Public Health, Biostatistics
Students with an MPH in biostatistics develop skills to implement research studies of human health and disease; design data management systems; interpret quantitative data; and use statistical reasoning to address public health problems.

Both MPH programs accommodate full and part-time students.

Doctor of Philosophy, Epidemiology
Prepare for a career in epidemiologic research in academia, government or the private sector. Our students will master essential core knowledge in the principles and methodology of epidemiological research and practice. Students may design their own research specialization or they may apply to one of our two specializations: 1) Social Epidemiology, and 2) Environmental Epidemiology.

THE UNIVERSITY
A global leader in research, entrepreneurship and innovation, Maryland is ranked No. 21 among public universities by U.S. News & World Report and No. 14 among public universities by Forbes. The Institute of Higher Education, which ranks the world’s top universities based on research, puts Maryland at No. 38 in the world, No. 29 nationally and No. 13 among U.S. public research institutions. Located “inside the beltway” just minutes from the nation’s capital, the University of Maryland, College Park campus provides unparalleled access to unique opportunities for internships and research experiences in public health, including placements at the National Institutes of Health (NIH), the CDC Washington Office, other agencies and offices in the U.S. Department of Health and Human Services, Children’s National Medical Center, the Maryland Department of Health and Mental Hygiene, and many other national, state, and local health agencies. In addition to being a vibrant hub of research and policy, the D.C. area’s rich and diverse culture make it an especially lively, friendly, and accessible community where students, faculty and staff can thrive professionally and personally.

ADMISSIONS DEADLINES
All admissions deadlines are for fall 2016 matriculation.

MPH, Epidemiology
12/15/2015

MPH, Biostatistics
12/15/2015

PHD, Epidemiology
11/15/2015
