III.C. Teaching Innovations

III.C.1. COURSE OR CURRICULUM DEVELOPMENT

Course Creation

HNUH 218V – Black Bodies and Green Spaces: From 1619 to Today

From the enslaved on antebellum plantations, who used the surrounding uncultivated land as a place of deliverance, healing and route to freedom, to the Central Park bird watcher, whose green space presence was perceived as a threat to White physical safety, this course will critically examine how systemic racism shaped the experience, connection, and relationship to nature among Black Americans. The classes will be temporally structured to provide an opportunity for in-depth analysis, critical thinking, and discussion on topics including, but not limited to (a) slavery and nature; (b) The Great Migration (rural to urban living); (c) “Strange Fruit” in nature; (d) Jim Crow, segregation, urban renewal and parks; (e) land grants and BIPOC (Black, Indigenous and People of Color) bodies; (f) environmental racism and green space inequity; (g) active living and public health; (h) “Moving While Black” (Treyvon to Ahmaud); and (i)

green space re-connection and NatureRx. While some environments (e.g., built, natural, social, virtual) within the United States have represented the essence of anti-Black racism and indignity, this course will explore how many Black Americans still regarded nature as a space of freedom, humanity, and spirituality.

Course Creation

KNES 401 – Zip Code: Its Prediction on Physical Activity and Health

This new upper level undergraduate course is inspired by the phrase, “Your zip code is a better predictor of your health than your genetic code”, a statement originated by Dr. Melody Goodman, an Associate Professor of Biostatistics at NYU. The course provides an opportunity for in-depth analysis, critical thinking, and discussion on questions such as, “How can we better understand the health implications of our built environments, particularly in regard to physical activity?”; “How can we address health inequity issues related to built and social environments?” Students have the opportunity to reflect and examine physical activity epidemiological research findings by considering the social, political, economic, and environmental contexts that create and sustain health outcome disparities and inequities.

Course Section Creation

KNES 497 – Physical Activity, Built Environment and Public Health

A new section for an upper level undergraduate course (kinesiology majors) was created for students to examine and critically analyze the current research literature relevant to the relationship between the built environment and physical activity as well as the public health impacts of this relationship. An in-depth, independent examination of the current active living research will be achieved through in-class discussions and interactive assignments in the class as well as in the community.

Course Modification

KNES 601: Epidemiology of Physical Activity

Course material and content was updated to include a more depth and breadth of physical activity epidemiological concepts. Principles of sustainability as relate to active living which were discussed during the Chesapeake Project Faculty Development Workshop were also incorporated into the course. New assignments and in-class exercises were created to provide students with opportunities to apply knowledge and stimulate class discussion.
