Prepare for a career that addresses public health challenges facing global communities today.

Our interdisciplinary degree program in Public Health Science enables you to succeed in public health, medicine, dentistry, pharmacy, nursing, or allied health professions, such as occupational and physical therapy.

Our students go on to graduate programs in varied disciplines, careers in health professions at local, national and global organizations, and interdisciplinary work in disease prevention, environmental protection, and health promotion.

The Public Health Science program includes a strong curriculum in science and public health courses, such as biostatistics, epidemiology, environmental health, and global health.

Students have the opportunity to explore public health through electives, laboratory experiences, optional internships, and a culminating interdisciplinary capstone course.

In addition to foundational courses in the natural sciences, our students’ public health courses include:

- Behavioral and Community Issues in Public Health
- Environmental Justice, Racism, and Environmental Health Disparities
- Social, Political, and Ethical Issues in Public Health
- Public Health Emergency Preparedness
- Global Health

My classes in the Public Health Science program taught me the importance of disseminating information and presenting it in an understandable way. After presenting my thesis in my public health capstone class, I now feel comfortable presenting at conferences dealing with health disparities.”
